

Key Security & Benefits

NE Series Padlocks

NE Series Padlocks

A padlock is intended to offer high security and the ability to deter break-ins. This can only be achieved if the right padlock is specified. Security is only as good as its weakest link. Knowing the right padlock for the application is key.

Know Your NE Series Padlock

When it comes to padlocks, size does not necessarily equate with strength. A large padlock made from low quality materials is much easier to break than a smaller, high security one.

Selecting the right padlock requires that you understand a specific application's needs. Then you can match the most appropriate padlock by considering the benefits of each one.

Mul-T-Lock® NE Series Padlocks

NE Padlocks offers high efficiency and high security whilst maintaining the high performance and serviceability associated with Mul-T-Lock® padlocks. With body options offering open and closed shackle variants, and with the addition of sliding bolt padlocks, the NE series ensures that there is a high security padlock suitable for your needs.

Key Security

The NE series is available with all Mul-T-Lock key platforms. This opens up a range of benefits including patented key security, bespoke master key options and our innovative keyed-alike system. Patented key padlocks are supplied with a key cutting card, which will hinder unauthorized duplication of your keys.

Master Key

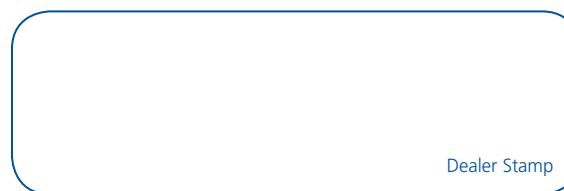

Where multiple padlocks are required as part of an overall security system, Mul-T-Lock® master key systems enable each padlock to have its own key, yet authorized personnel can have a key which can open specified, or all padlocks, as desired.

Keyed Alike

Mul-T-Lock® NE Series Padlocks can be keyed alike. This means that you can operate all of your NE Padlocks with the same key for real convenience.

- * Applicable for Interactive+®, MT5+®, MT5® and Integrator®.
 - ** CEN Grade is model specific (see technical data guide)
- Illustration represents NE14H.
